

Are you Agile?

Agile

Agile is a **project management methodology** that uses short development cycles called “sprints” to focus on continuous improvement in the **development** of a product or service.

Why is Agile important?

- Iterative
- Quality
- Transparency
- Lower Risk
- Flexibility
- Cost Effective
- Customer Engagement

Where we use Agile?

- Software Development
- Network
- Hardware
- Infrastructure
- And everything else we do in IT...

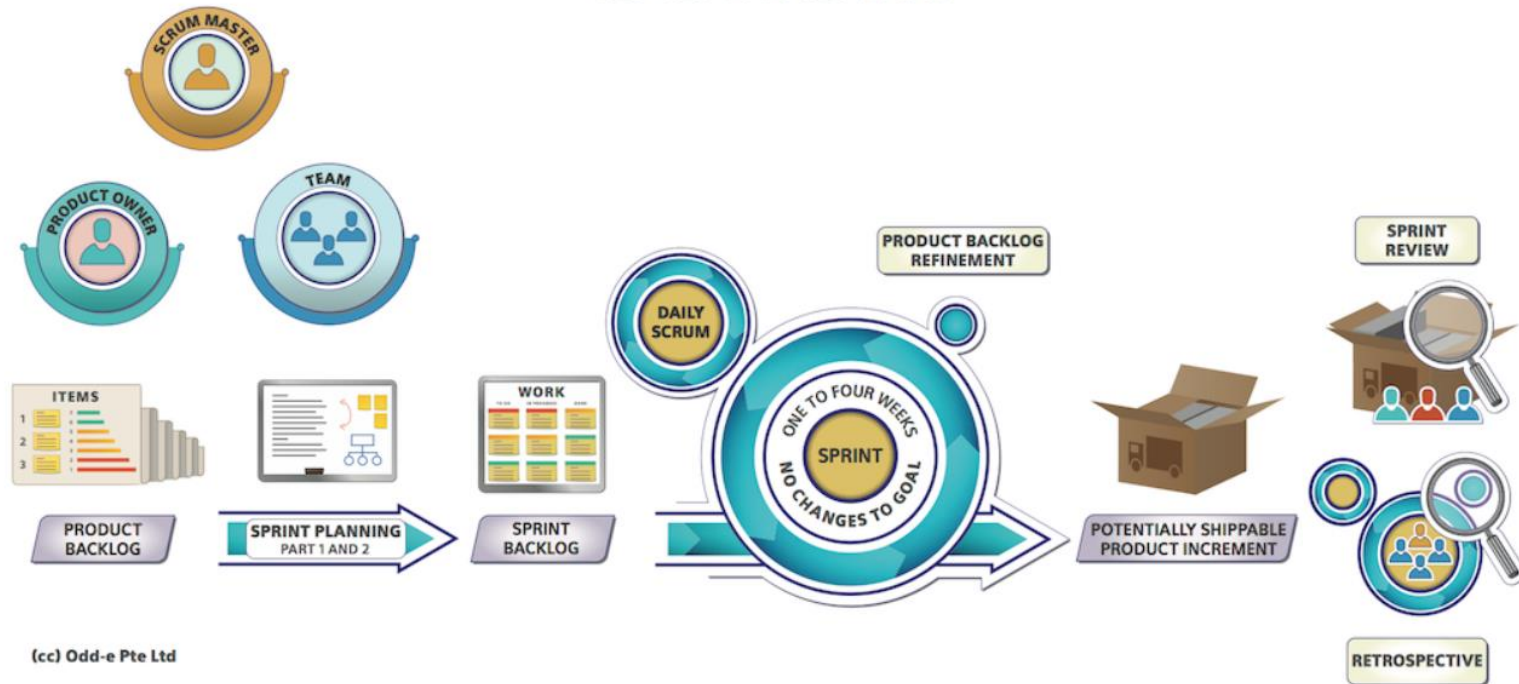

What are flavors of Agile?

Kanban

Scrum

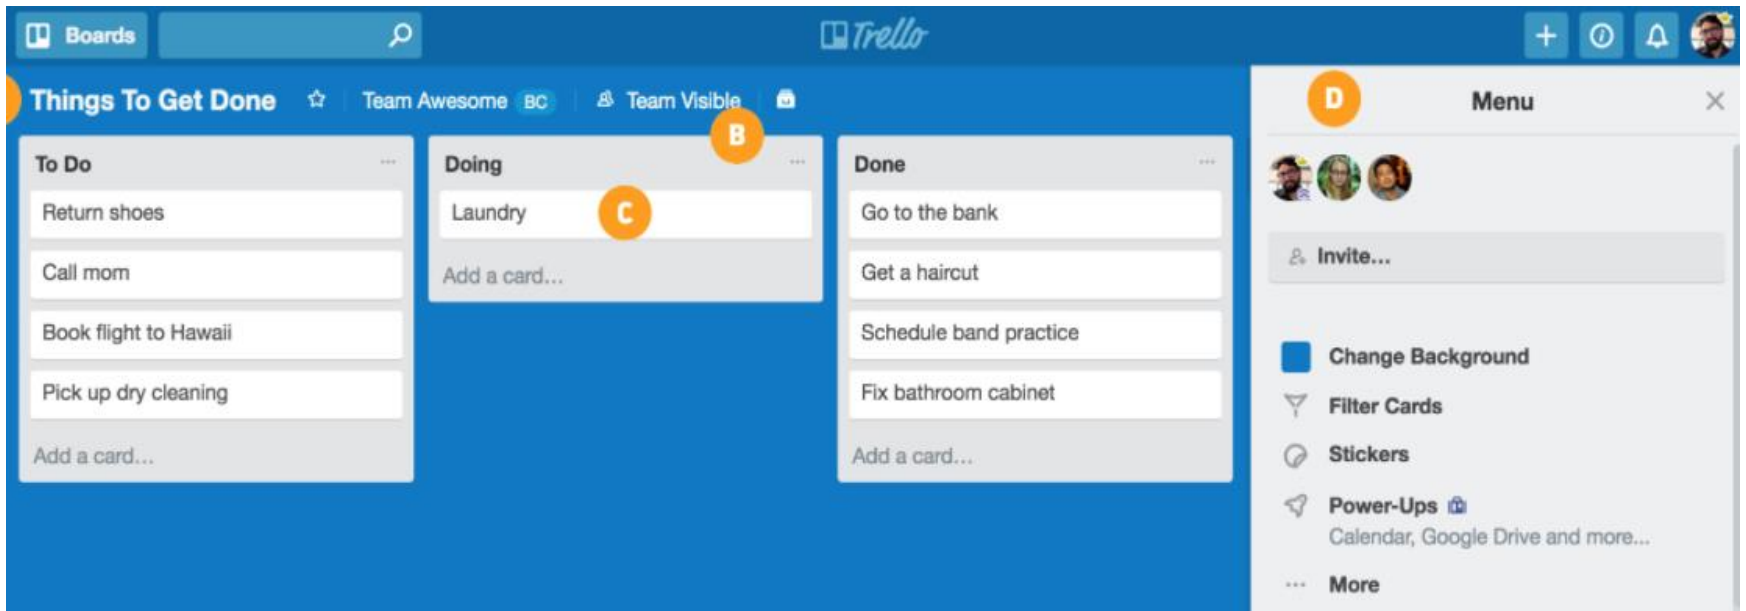

No prescribed roles	↔	Pre-defined roles of Scrum master, Product owner and team member
Continuous Delivery	↔	Timeboxed sprints
Work is "pulled"™ through the system (single piece flow)	↔	Work is "pulled"™ through the system in batches (the sprint backlog)
Changes can be made at any time	↔	No changes allowed mid-sprint
Cycle time	↔	Velocity
More appropriate in operational environments with a high degree of variability in priority	↔	More appropriate in situations where work can be prioritized in batches that can be left alone
Organization, culture and team dynamics often determine which method is the best fit.
